Subject: RE: Lowerline Assessment Data
Attachments: ATT00001.txt

A couple of other questions from our people:

- What is the cleanup criteria?-Will we use a PRG approach for the scenario, 5 pCi/g, or twice background which is mentioned in the LDEQ reports?
- Did you all perform a correlation? Or just went with twice background as the cleanup level? If so what is the CPM # for action level?
- Do you all have any smear results for the decon?
- Do you have a basic statement regarding the frequency and documentation procedures for meter calibration and operation checks? Will help our team with the validation of the data.
- Did you all use a PIC? If so can you provide readings?

Thanks
David

**** External Email ****

I was able to reformat into an Excel file that's small enough to transmit. I didn't embed the images. The file includes all the salient information. Coordinates are in LA state plane, NAD 83 datum, differentially corrected. CPM is from a Ludlum 44-10, gross counts, open window on the 2221 with 1 second export.

Let me know if there's any questions.

Kelly or Greg,

Were you able to set up an FTP site to transfer the Lowerline data?
